

Lemon/Crab

Assignment: You will duplicate a lemon on the plate to create a nice looking picture. You have to select the lemon and place it around the plate so it looks like a lot of lemons.

Getting Started:

** Part 1:*

1. Get the file LEMON.JPG off the blog and drag it to your desktop
2. Select the lemon:

1. Use the magic wand  (hold the shift key while you click on the lemon) **OR**
2. Use the circular marquee tool.  Drag a circle around the lemon (hold the space bar to let you move the circle around without changing it's size.)

3. Copy the lemon: Once you have the lemon selected, you are going to make copies of it (duplicate) and place them around the edge of the plate:

1. Use the "Move" tool 
2. Hold the "Command" and "Option" key down while you click and move the lemon.
3. Place a row of lemons part way around the crab.

_____ Finished part 1

** Part 2:*

4. Copy the crab: Select the part of the crab you want the lemons to go under using the "Lasso" tool. 

1. Remember that holding the shift key will **add** to the selection and holding the option key will **subtract** from the selection.

5. Copy and past the selection: Edit > Copy, Edit > Paste (this puts part of the crab on a new layer above the background so it will hide the lemons)

1. Repeat the same procedure for the other side of the crab and add lemons

_____ Finished part 2

Checklist:

- _____ You have a good selection of the lemon (it's nice and round)
- _____ You have a good selection of the crab
- _____ The lemons look like they are under the crab
