

parent **ROADMAP**

SUPPORTING YOUR CHILD IN GRADE FIVE
MATHEMATICS

A Message from the Santa Ana Unified School District Superintendent

Dear Parents,

In this ever-changing world, our students must be equipped with the skills and knowledge to compete in a global society. The creation of the Common Core State Standards was a collaborative effort by State Governors and State Superintendents across the nation to create rigorous and consistent educational standards. Thus far, the Standards have been adopted by 46 states so that every student, whether in California, New York, or Colorado, will experience the same level of educational standards regardless of where they reside.

The Common Core State Standards will assist us in providing a world-class education that is preparing students to be college and career-ready as part of the District's Seven Building Blocks to Success. Santa Ana Unified School District already has a strong foundation of academic success, so the implementation of the Common Core State Standards will simply build upon that success. You will notice incremental changes in the instruction of the District as we move forward with implementing these new standards. While your child will continue to develop his or her skills in a subject, there will be a greater focus on applying them in real-world applications working with peers. We believe that together, we can collectively work to support your child to be a successful learner.

This booklet is being provided to you to demonstrate what your child will be learning in the classroom and how you can be an active participant in helping your student master skills at each grade level. I encourage you to read this booklet carefully so that you can discover a variety of ways to best support your child's success. As always, we invite you to be engaged. If you have any questions or concerns, please feel free to contact your child's principal or teacher.

Best regards,

Thelma Meléndez de Santa Ana, Ph.D.
Superintendent

What your child will be learning in grade five mathematics.

In grade five, students will build their understanding of the place value system by working with decimals up to the hundredths place. Students will also add, subtract, and multiply fractions, including fractions with unlike denominators. They will continue to expand their geometry and measurement skills, learning the concept of volume and measuring the volume of a solid figure. Activities in these areas will include:

- Quickly and accurately multiplying multi-digit whole numbers
- Dividing numbers with up to four digits by two digit numbers
- Using exponents to express powers of 10 (in 10^2 , 2 is the exponent)
- Reading, writing, and comparing decimals to the thousandths place
- Adding, subtracting, multiplying, and dividing decimals to the hundredths place
- Writing and interpreting mathematical expressions using symbols such as parentheses. For example, “add 8 and 7, then multiply by 2” can be written as $2 \times (8 + 7)$.
- Adding and subtracting fractions with unlike denominators (bottom numbers) by converting them to fractions with matching denominators
- Multiplying fractions by whole numbers and other fractions
- Dividing fractions by whole numbers and whole numbers by fractions
- Analyzing and determining relationships between numerical patterns
- Measuring volume using multiplication and addition

Partnering with your child’s teacher

Don’t be afraid to reach out to your child’s teacher—you are an important part of your child’s education. Ask to see a sample of your child’s work or bring a sample with you. Ask the teacher questions like:

- Is my child at the level where he/she should be at this point of the school year?
- Where is my child excelling?
- What do you think is giving my child the most trouble? How can I help my child improve in this area?
- What can I do to help my child with upcoming work?

Here are just a few examples of how students will develop and use their understanding of place value in grade five.

Grade Four Mathematics

- Use place value understanding to round multi-digit whole numbers to any place
- Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right
- Compare two multi-digit numbers based on meanings of the digits in each place, using the symbols $>$ (more than), $=$ (equal to), and $<$ (less than)

Grade Five Mathematics

- Use place value understanding to round decimals to any place
- Recognize that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right and $\frac{1}{10}$ of what it represents in the place to its left
- Read, write, and compare decimals based on the meanings of the digits in the tenths, hundredths, and thousandths place

Grade Six Mathematics

- Understand that positive and negative numbers are used together to describe quantities having opposite directions or values
- Understand a rational number (fraction, decimal, and percent) as a point on the number line
- Understand ordering and absolute value of rational numbers

Students use place value understanding to figure out that, based on where the digits are located within the number, 0.115 is less than 0.151.

Students recognize that a 5 in the thousandths place is only one tenth the value of a 5 in the hundredths place.

Here are just a few examples of how students will learn about and work with fractions in grade five.

Grade Four Mathematics

- Break apart a fraction into smaller fractions with the same denominator, or bottom number, in more than one way. For example, $\frac{3}{8} = \frac{1}{8} + \frac{1}{8} + \frac{1}{8} = \frac{2}{8} + \frac{1}{8}$
- Explain why a fraction is equal to another fraction
- Add and subtract mixed numbers (whole numbers mixed with fractions, such as $1\frac{1}{5}$) with the same denominators
- Multiply a fraction by a whole number

Grade Five Mathematics

- Interpret a fraction as division of the numerator (the top number) by the denominator (the bottom number)
- Add and subtract fractions with different denominators
- Multiply a fraction by a whole number or another fraction
- Divide fractions by whole numbers and whole numbers by fractions

Grade Six Mathematics

- Divide fractions by fractions using visual models and equations to show the problem

Understanding how to divide objects into equal shares prepares students for the division of fractions.

Students will use pictures such as this to see that $4 \div 3$ is the same as dividing 4 objects equally among 3 shares, or having 4 thirds ($\frac{4}{3}$).

Helping your child learn outside of school

1. Use everyday objects to allow your child to explore the concept of fractions. For example, have your child divide a candy bar (or a healthy snack) between three people. Ask, “How much does each person receive?” (Each person would receive $\frac{1}{3}$). Suppose there are three candy bars that you plan to share with two friends. Have your child describe the amount that each person will receive.
2. Have your child explain how to write fractions in different ways. For example, what are some different ways to write $\frac{4}{3}$? He or she could answer $4 \div 3$, $1\frac{1}{3}$, $\frac{2}{3} + \frac{2}{3}$, $2 \times \frac{2}{3}$, $\frac{8}{6}$, $4 \times \frac{1}{3}$, etc.
3. Ask your child to give you a fraction equal to a decimal. For example, what are two fractions that can be used to represent 0.6? Answers could include $\frac{6}{10}$, $\frac{60}{100}$, $\frac{12}{20}$, or $\frac{3}{5}$.
4. Encourage your child to stick with it whenever a problem seems difficult. This will help your child see that **everyone** can learn math.
5. Praise your child when he or she makes an effort and share in the excitement when he or she solves a problem or understands something for the first time.
