

Things Your Student can do to do well in Science

1. Actively participate in class discussion by answering questions, asking question, disagreeing with an answer, expressing their point of view and being able to defend it.
2. Paying attention to detail. Should not be skipping any parts of the worksheet. If did not understand then there should be a detailed question telling what part was not understand.
3. _No copying or cheating.
4. Come prepared for learning by bringing your learning materials like notebook, couple of pens pencils, ruler, calculator. This way you are not wasting time by asking other students.
5. Do things at assigned time. Take out materials, copy homework etc. If you socialize then you lose time and spend the rest of the time catching up and asking other students.
6. Be in the habit of reading the instructions on the board when you enter class. When worksheets are passed out read them ASAP, do not wait for me to initiate reading.
7. Refer back to the notebook to review concepts. Notebook is only useful if it is organized and writing is legible.
8. When absent check my webpage. Upon returning to class do not try to catch up on the work missed the day you were absent. I give a day to submit work missed due to an absence.

What can you do to make your child succeed in class

1. All the basic common sense things that parents do 😊
2. Have them hold different object so they can feel how heavy different weights can be. Have them guess the height of different objects.
3. Go on Parent Portal and let them know that you are watching.
